1 Global config

1.1 Change the Global theme

Global theme -> Dark Breeze

1.2 Add nice Desktop effects

Workspace behavior -> Desktop effects:

- Accessibility -> Positioning aid
- Virtual desktop change animation -> Cube desktop animation
- Focus -> Blur the inactive
- Ornaments -> Gelatin windows, Sheet and Fall into ruin

1.3 Add a virtual desktop

Workspace behavior -> Virtual desktops -> Add -> Rename

1.4 Deactivate the auto screen lock

Workspace behavior -> Screen lock -> deactivate Auto screen lock

1.5 Change the lock screen picture

Workspace behavior → Lock screen → Appearance

1.6 Change the login screen (sddm)

Startup and shutdown → Login screen (SDDM) → Get new login screens → Chill for Plasma

1.7 Activate the Startup with empty session option

Startup and shutdown → Desktop session → On connection → Startup with empty session

1.8 Change the Splash screen animation

Startup and shutdown → Splash screen → Get new splash screens → QuarksSplashDark

1.9 Activate the Start indicator

Applications → Start indicator → Bouncing cursor

1.10 Configure the Touch pad for a laptop

Input devices → Touch pad

- Touches → activate Touch to click
- Scrolling → Two fingers and Scroll reverse

1.11 Activate the Night mode

Display and screen → Night color

1.12 Configure energy management

Energy management:

- Decrease screen brightness: 10min
- Energy saving for the screen: 25min
- Suspend the session: 30min

2 Desktop config

2.1 Change your Wallpaper

Right click on the desktop → Desktop configuration

2.2 Add graphical components

Right click on the desktop → Add graphical components:

- Hard drive monitoring
- Hard drive space usage
- Processor monitoring
- Network monitoring
- Notes

3 Taskbar config

3.1 Organize your Menu

Right click on the start button (taskbar on the left), then choose **Configure applications launcher**

- General → Sort alphabetically

- **Active tabs** → drag and drop the items in this order: "Applications-Computer-Favorites-History-Exit"

3.2 Hide useless icons

Right click on the white little **up arrow** in the taskbar on the right (just on the left of the hour), then choose **Configure miniatures box**

Select the icons you want to **Always show, show when used, always hide, deactivate**

4 Dolphin config

Dolphin → hamburger menu → **Configure Dolphin**:

- **General** → **Behavior** → deactivate **Show Selection indicator**
- **Start-up** → deactivate **Open new folders in tabs**

5 Kate config

Kate → **Configuration** → **Configure Kate**:

- **Appearance** → **Advanced** → **Highlight the range between the selected parentheses**
- **Fonts and color** → **Default schema for Kate** → **Breeze Dark**
- **Modification** → **Automatic braces** → **Activate automatic braces** → **<>(){}[]**
- **Open/Save** → deactivate **Add a new line at the end of the file when saving**

6 LibreOffice config

LibreOffice Writer → **Tools** → **Options** → **Display** → **Icon style** → **Breeze Dark**
